Spot the Differences

Oh no! The Slightly Annoying Elephant has made a huge mess in Ms. Hina's house and then fallen asleep! But can you spot the six differences between these pictures? Circle them as you find them.

Elephant Fact
The elephant's trunk is able to sense the size, shape and temperature of an object.

MY Post STEM Activity: Flying Birds

Can you make paper birds fly using a balloon? Use the power of static electricity to magically pick up paper and move it around.

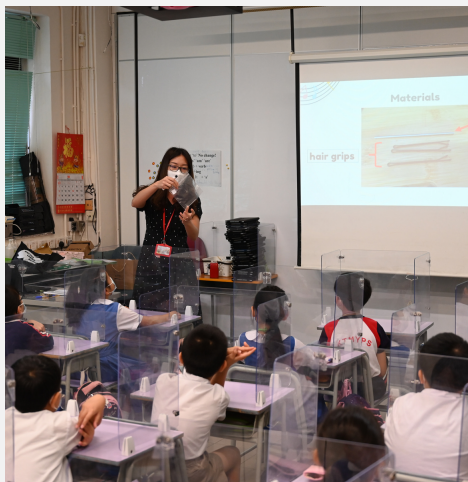

Follow the steps below to make the flying birds:

1. Use markers to draw a few birds on tissue paper and cut them out with scissors.
2. Lay the paper birds on a flat surface.
3. Blow up a balloon and tie it off at the end.
4. Rub the balloon on wool cloth or on your hair for 10 to 20 seconds.
5. Hold the balloon a few inches above the paper birds. See if you can make them fly without touching them!

The interesting fact!

When a balloon is rubbed with wool cloth, electrons are transferred from the cloth to the balloon. This gives the balloon an overall negative charge. Even though the paper has a neutral charge, the charges within it can rearrange so that a positively charged area is attracted by the negatively charged balloon.
